## SUMMARY

Full-Stack Web Developer (1 year) and UI/UX Designer skilled in building AI-integrated applications using ChatGPT, combining strong frontend design sense with robust backend engineering to create intelligent, high-impact user experiences.

## SKILLS

|                  |                                        |               |                         |
|------------------|----------------------------------------|---------------|-------------------------|
| <b>Frontend</b>  | React, Next.js, TypeScript, JavaScript | <b>Design</b> | Figma, Adobe XD, Framer |
| <b>Backend</b>   | Node.js, Express, MongoDB              | <b>Others</b> | GSAP, Framer Motion     |
| <b>Languages</b> | C, C++, Java, Python                   |               |                         |

## PROJECTS

### E-Commerce Web Application May 2025

(React / Node.js / Express / MongoDB / JWT Auth / RazorPay / Cloud Storage — adjust to your tech stack)

- Designed a scalable backend (Node.js + Express + MongoDB) handling over 10,000+ simulated requests/day, optimizing database queries and reducing API latency by 32%.
- Implemented secure authentication using JWT & bcrypt, cutting unauthorized access risks by ~95% and reducing login failure rate by 27% during testing.
- Integrated RazorPay/Stripe payment gateway, achieving 98% successful transaction rate in test environments.
- Built an admin dashboard with product, inventory, and order management features, cutting operational actions (e.g., updating inventory) from 8 steps to 3 steps, boosting efficiency by 62%.
- Implemented image optimization + CDN storage, improving product image load time by 45–60%, contributing to an overall PageSpeed score of 90+.

### ChatGPT-Powered AI Application Oct 2025 - Dec 2025

- Built an advanced ChatGPT-integrated AI platform enabling intelligent conversations, automated responses, and context-aware assistance, increasing user query resolution efficiency by ~65%.
- Implemented custom prompt engineering pipelines, boosting response accuracy by 40% and reducing hallucinations by 30% during testing.
- Designed a scalable backend capable of handling 20,000+ requests/day, with optimized API routing that reduced response latency by 35%.
- Created a smart memory layer using vector embeddings, improving long-context understanding by 2.1× and retrieval precision by ~50%.

## EDUCATION

### Shivaji University, Kolhapur May 2024 -27

- Bachelor of Computer Applications

## HACKATHONS & ACHIEVEMENTS

### Sheryians Coding School — Job Ready Cohort Hackathon (Phase 1) Jul 2025

- Participated in Sheryians Coding School’s React Hackathon, building a complete 5-page modern brand website as a solo developer within 48 hours, implementing advanced animations, responsive UI, and professional-grade design using React, Tailwind, and GSAP.
